Attorney's Docket No. 000500-128

2. A method of producing polysaccharide fibers according to claim 1, further comprising the steps of stretching, rolling-up, drying and cutting the polysaccharide fibers

after the bath.

3. A method of producing polysaccharide fibers according to claim 1, wherein the

organic solvent is an alcohol or a ketone.

4. A method of producing polysaccharide fibers according to claim 3, wherein the

organic solvent is methanol, ethanol, isopropanol or acetone.

5. A method of producing polysaccharide fibers according to claim 1, wherein the

cross-linker is a polyelectrolyte.

6. A method of producing polysaccharide fibers according to claim 5, wherein the

cross-linker is polyvinylamine or hexadimethrinbromide.

7. A method of producing polysaccharide fibers according to claim 1, wherein the

cross-linker is a salt where the cation in the salt is a metal ion.

8. A method of producing polysaccharide fibers according to claim 7, wherein the

cation in the salt is divalent, trivalent or quadrivalent.

- 9. A method of producing polysaccharide fibers according to claim 8, wherein the cation in the salt is calcium, magnesium, iron, aluminium or zirconium.
- 10. A method of producing polysaccharide fibers according to claim 7, wherein the anion in the metal salt is chloride.
- 11. A method of producing polysaccharide fibers according to claim 1, wherein the polysaccharide is comprised of carboxymethyl cellulose, starch, gellan, pectin or alginate.
- 12. A method of producing polysaccharide fibers according to claim 1, further comprising the step of cross-linking the fiber covalently in a following stage.
- 13. A polysaccharide fiber, comprising a polysaccharide fiber having been produced according to the method of claim 1.
- 14. A polysaccharide fiber according to claim 13, wherein the fiber has been solvent-spun and has a degree of substitution greater than 0.35, is cross-linked, and insoluble, but swellable, in water.
- 15. An absorbent structure in an absorbent article, wherein the absorbent structure includes polysaccharide fibers having been produced according to claim 1.

Application No. <u>09/101,341</u> Attorney's Docket No. <u>000500-128</u>

- 16. The absorbent structure according to claim 15, wherein the absorbent article is selected from the group consisting of a diaper, an incontinence guard and a sanitary napkin.
- 17. A method of producing polysaccharide fibers according to claim 1, wherein the cross-linker ionically cross-links the polysaccharide.
- 19. A method of producing polysaccharide fibers according to claim 1, wherein the bath is acidic.
